1.4.2	Excercise . . . . .	2
1.4.3	Pitfalls to avoid . . . . .	2
1.4.4	Excercise . . . . .	2

## 1 Agenda

### 1.1 Recurrence Relation (using Asymptotic Notation)

### 1.2 Merge Sort – Time Complexity

### 1.3 Recursion Tree

$$T(1) = \Theta(1)$$

$$T(n) = 2T(n/2) + \Theta(n)$$

- Prove using Recursion Tree

$$T(n) = \Theta(n \log n)$$

## 1.4 Substitution Method

- Prove for  $T(n) = 2T(n/2) + n$
- Guess for  $T(n)$  and prove by induction

### 1.4.1 Try doing using asymptotic notation

$$T(1) = \Theta(1)$$

$$T(n) = 2T(n/2) + \Theta(n)$$

- Express using constants while proving using induction
  - Separately for the upper bound
  - Separately for the lower bound

### 1.4.2 Pitfalls to avoid

- Avoid asymptotic notation in the inductive hypothesis of the substitution method.

### 1.4.3 Excercise

$$T(n) = T(n/3) + T(2n/3) + \Theta(n)$$

- Guess the upper and lower bounds using the recursion tree
- Substitute the guessed function in the recurrence relation
